Qair signs long-term PPA with Holcim in Poland

PRESS RELEASE

Paris & Wroclaw, 26 November 2026 – Renewable energy company Qair announces the signature of a 10-year Power Purchase Agreement (PPA) with Holcim Polska S.A., part of Holcim Group, a global leader in sustainable construction. Under this agreement, Qair will develop a PV plant on Holcim Polska's land and supply 18 GWh of green electricity annually.

This agreement leverages a virtual Power Purchase Agreement (PPA) with additional on-site PV development, combining the advantages of financial flexibility and operational resilience. By locating the renewable energy project on Holcim Polska's own land, the PPA ensures optimized land use, simplified administrative processes, and direct alignment with the company's energy needs.

Virtual PPAs: enabling renewable energy investment and price certainty

A virtual Power Purchase Agreement (vPPA) is a long-term financial contract that enables companies to support renewable energy projects while managing exposure to electricity price volatility, without physically receiving the power generated. By providing greater price visibility for corporate buyers, predictable revenue streams for renewable energy producers, and a mechanism to support investment in new renewable capacity, vPPAs play an important role in accelerating the energy transition.

This collaboration enables Holcim Polska to secure a reliable, long-term energy supply, underscoring Qair's dedication to providing tailored energy solutions for its industrial partners.

About Qair

Qair is an independent renewable energy company developing, financing, building, and operating solar, onshore and offshore wind, hydroelectric, tidal energy, renewable hydrogen production and storage projects.

With 1.7 GW of capacity in operation and over 1 GW in financing or construction, the group's 800 employees are developing an additional 28 GW pipeline in 20 countries across Europe, Latin America and Africa. Our ambition is to become an independent leader in responsible energy.
