

## Qair secures its first UK financial close for 46MWp Brecks Solar Farm

PRESS RELEASE

**Paris, 4 June 2026** – Independent renewable energy company Qair has successfully secured financing for its 46.51 MWp Brecks Solar Farm, the Group's first project in the UK to reach financial close. This milestone demonstrates Qair's ability to execute in the UK market, de-risking its c.1 GW advanced pipeline by proving its capacity to navigate local regulatory, financial, and operational challenges.

[The project benefits from the UK government's Contract for Difference \(CfD\) scheme](#), which guarantees 20-year revenue stability, ensuring predictable cash flows and mitigating market volatility risks. Construction is set to commence in June 2026, with operations expected in Q2 2027. Once operational, Brecks Solar Farm will generate enough renewable electricity to power over 15,000 homes annually, directly contributing to the UK's clean energy transition and domestic energy security.

By securing financing for this project, Qair demonstrates its ability to deliver large-scale renewable projects in the UK, strengthening its position as a trusted partner for the country's net-zero targets and domestic energy security.

### About Qair in the UK

Following the acquisition of Green Switch Capital (GSC) in 2024, Qair is actively developing a diversified pipeline of over 5 GW across solar PV, battery storage (BESS), and onshore wind projects in the UK. This expansion complements Qair's existing portfolio in Scotland, including the 1 GW Ayre offshore wind project, awarded through the ScotWind leasing round.

With teams based in Liverpool, London, Edinburgh and Glasgow, Qair combines local expertise with global experience to deliver innovative, large-scale renewable energy solutions that support the UK's net-zero ambitions.

### About Qair

Qair is an independent renewable energy company developing, financing, building, and operating solar, onshore and offshore wind, hydroelectric, tidal energy, renewable hydrogen production and storage projects.

With 1.7 GW of capacity in operation or under construction, the group's 780 employees are developing an additional 33 GW pipeline in 20 countries across Europe, Latin America and Africa. Our ambition is to become an independent leader in responsible energy.
