

Qair

The future is renewable

Qair [ker]

We are an independent renewable energy company

Our expertise : Energy as a service

Multi Energy

We believe diversity is crucial for long-term energy security. By relying on our own expertise and strategic partners, we deliver both mature renewables (wind, solar PV) and cutting-edge technologies (offshore wind, green hydrogen, and storage). This flexibility allows us to provide the best-adapted and most reliable energy mix.

Integrated Renewable Energy

From our origins as an Independent Power Producer, we have become a fully integrated energy company. Today, our expertise spans the entire renewable energy value chain, from development, financing and construction to operations, repowering and decommissioning with the objective of supplying cost-effective renewable energy to our clients. We ground this holistic approach in a strong commitment to innovation and sustainability.

Energy Management

By offering direct power purchase agreements (PPA) and hydrogen purchase agreement (HPA), we empower our customers to reduce their carbon footprint, minimise price volatility, and benefit from long-term energy security. The key to our offer? A diversified and continually growing asset mix.

Qair

Ever since its origins, Qair has been focused on the future of our energy. Over 30 years ago, our teams started creating wind and solar solutions to become a precursor of the energy transition.

Today, our company develops, finances, builds, and operates projects in green hydrogen, marine renewables, onshore renewables and energy management.

Activities

Since its origins, Qair has been a pioneer in three core components of onshore renewables: hydroelectricity, solar energy and wind energy. All three remain central to our strategy to deliver green electrons to our customers.

At Qair, we believe offshore wind will become increasingly important to address acceptance issues around onshore wind. Furthermore, offshore wind benefits from more regular and higher-speed winds, enabling it to provide a massive amount of electrons for direct consumption or for renewable hydrogen projects.

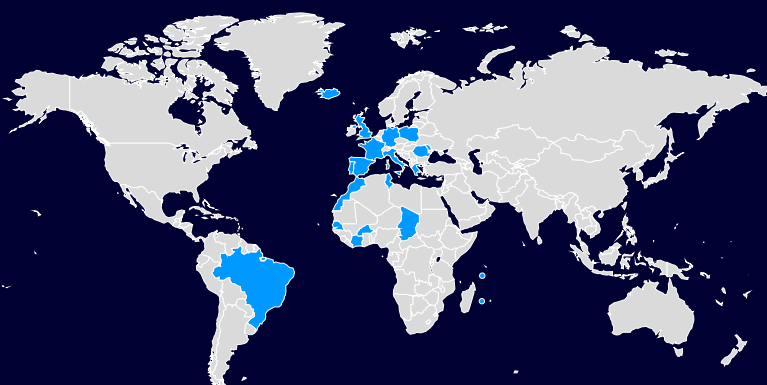

Renewable hydrogen is key to decarbonising industry, maritime and mobility. Qair is actively preparing for a future with renewable hydrogen and its derivatives by establishing mid- and large-scale production facilities in countries carefully selected for their high potential.

Qair's Energy Management team shapes tailored solutions to provide a reliable supply of electricity that fits customers' decarbonisation strategies. Based on the customer's energy needs and environment, we build the best-adapted offer to mitigate risks and optimize flexibility from our diverse portfolio of assets. Our goal is to ensure a stable, long-term and cost-effective supply of electricity.

A global multi-local approach

We are proud that our entrepreneurial spirit continues to define the way we work. We always use a multi-local approach to involve local stakeholders in all our activities. Through these close collaborations, we shape tailored, agile solutions that constantly adapt to the energy needs of each region.
